## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3 and 8-9, drawn to polynucleotides, classified in class 536, subclass 23.5.
- II. Claims 4-7, drawn to isolated polypeptides, classified in class 530, subclass 350.
- III. Claims 10-12, drawn to methods of screening, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

The products of groups I and II are structurally distinct polynucleotides and polypeptides that would require non-coextensive literature searches. Furthermore, the polypeptides could be made synthetically and/or isolated from nature rather than being produced recombinantly. The method of group III is distinct from each of the products as the polynucleotides can be used in hybridization assays, for example, and the polypeptides can be used to make antibodies, for example, rather than being used in the method as claimed. That is, they can be used in a materially different process of using that product (MPEP § 806.05(h)).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter, and necessity for non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Art Unit: 1631

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
